

## 8-4 Complementary, Supplementary and Vertical Angles

"I can determine the measure of an angle using angle relationships."

**Warm Up:** Answer the following questions based off your knowledge from 7<sup>th</sup> grade math.

- Define **complementary angles**: **angles that add to 90°.**  
**Form a right angle.**
- Define **supplementary angles**: **angles that add to 180°.**  
**Form a straight line.**

Complementary Angles	Vertical Angles
<p>Two angles are <b>complementary angles</b> if they add up to <b>90</b> degrees. They do not have to be next to each other.</p> <p><b><math>\angle a + \angle b = 90</math></b></p>  <p><math>50 + 40 = 90</math></p>	<p>When two lines intersect, four angles are created.</p> <p>Angles that are <b>across</b> from each other are called <b>vertical angles</b>.</p> <p>They are also <b>Congruent (equal!)</b></p>  <p><b><math>\angle a = \angle b</math></b></p>
Supplementary Angles	Linear Pairs
<p>Two angles are <b>supplementary angles</b> if they add up to <b>180</b> degrees. They do not have to be next to each other.</p>  <p><b><math>\angle a + \angle b = 180</math></b></p>	<p>Adjacent supplementary angles are called <b>linear pairs</b> because they form a <b>line</b>.</p>  <p><math>m\angle 1 + m\angle 2 = 180</math></p> <p><math>m\angle 1 + m\angle 3 = 180</math></p>

Exercise 1- Name the relationship: complementary, supplementary, vertical, or adjacent

(a) **vertical**  
 $\angle a = \angle b$

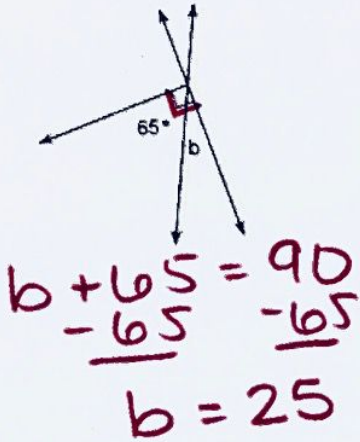

(b) **Supplementary**  
 $\angle a + \angle b = 180$

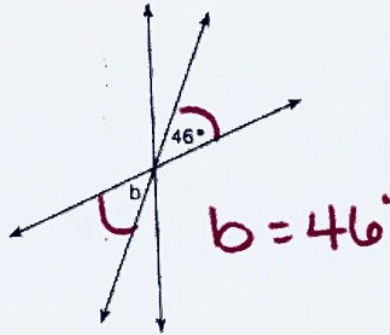

(c) **Complementary**  
 $\angle a + \angle b = 90$

Exercise 2- given the diagram below; determine the missing value for the angles

(a)  $\angle b = 25^\circ$

(b)  $\angle b = 46^\circ$

(c)  $\angle b = 51^\circ$

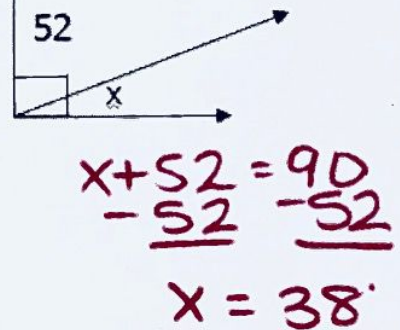

(d)  $132^\circ$

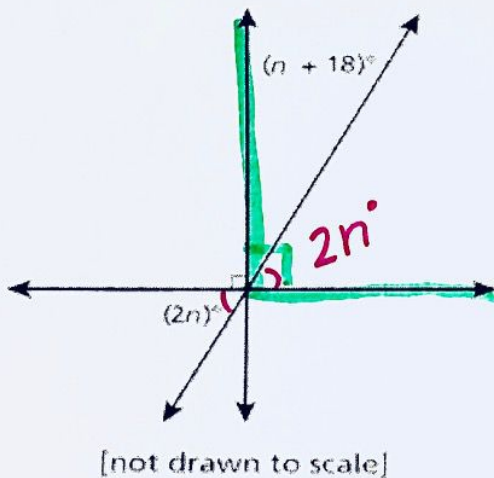

(e)  $68^\circ$

(f)  $38^\circ$

Exercise 3- What is the value of n, in the diagram below?

$$2n + n + 18 = 90$$

$$3n + 18 = 90$$

$$\underline{-18} \quad \underline{-18}$$

$$\frac{3n}{3} = \frac{72}{3}$$

$$n = 24$$
