## Unit 8: Angle Relationships

Math 8R

**Parallel Angle Relationships with Algebra**

**Directions:** In each of the following, identify the relationship between the two given angles. Then, write an appropriate equation in order to solve for  $x$  and find the measurement of the given angle.

1)

$$11x = 10x + 9$$

$$-10x \quad -10x$$

$$x = 9$$

2)

$$3x + 32 = 5x - 10$$

$$-3x \quad -3x$$

$$32 = 2x - 10$$

$$+10 \quad +10$$

$$\frac{42}{2} = \frac{2x}{2}$$

$$21 = x$$

Relationship: Alt. Int (Congruent)

$$x = 9$$

$$10x + 9 = 10(9) + 9 = 99^\circ$$

Relationship: Alt. Ext. (Congruent)

$$x = 21$$

$$5x - 10 = 5(21) - 10 = 95^\circ$$

3)

$$6x + 8 = 7x - 5$$

$$-6x \quad -6x$$

$$8 = x - 5$$

$$+5 \quad +5$$

$$13 = x$$

4)

$$20x + 5 + 24x - 1 = 180$$

$$44x + 4 = 180$$

$$-4 \quad -4$$

$$44x = 176$$

$$\frac{44}{44}x = \frac{176}{44}$$

$$x = 4$$

Relationship: Corresponding

$$x = 13$$

$$7x - 5 = 7(13) - 5 = 86^\circ$$

Relationship: Supplementary

$$x = 4$$

$$\angle AGE = 20(4) + 5 = 85^\circ$$

5)

$$20x + 16 = 21x + 11$$

$$-20x \quad -20x$$

$$\underline{16} = \underline{x + 11}$$

$$5 = x$$

6)

$$7x + 10 + 26x + 5 = 180$$

$$33x + 15 = 180$$

$$-15 \quad -15$$

$$33x = 165$$

$$\frac{33x}{33} = \frac{165}{33}$$

$$x = 5$$

Relationship: Alt. Ext. (Congruent)

$x = 5$

$21x + 11 = 21(5) + 11 = 116^\circ$

7)

$$2x + 39 = x + 64$$

$$-x \quad -x$$

$$x + 39 = 64$$

$$-\underline{39} \quad -\underline{39}$$

$$x = 25$$

Relationship: Vertical (Congruent)

$x = 25$

$2x + 39 = 2(25) + 39 = 89^\circ$

8)

$$10x + 2 = 12x - 8$$

$$-10x \quad -10x$$

$$2 = 2x - 8$$

$$+8 \quad +8$$

$$\frac{10}{2} = \frac{2x}{2}$$

$$5 = x$$

Relationship: Alt Int

$x = 5$

$12x - 8 = 12(5) - 8 = 52^\circ$
